Background

After extensive investigation into the three pending cases, it was found that two of the three cases were legitimate heat-associated deaths, while one case was ruled out. This addendum is a continuation of the 2013 Final Heat-Associated Death Report and includes a summarization of the two heat-associated deaths that have been confirmed. In this report you will find a table depicting the history and demographics of the two previously pending heat-associated deaths, followed by a series of tables depicting the preliminary 2013 results compared to the final 2013 results.
